How to recover clipboard history on samsung. How to recover clipboard history. How to recover deleted clipboard history.

Deleting text messages is usually a straightforward affair, but some people may be confused about (or unaware of) the different ways you can select and delete text messages on an Android device. This guide shows you how. The following instructions cover Google's Android Messages app and the stock app that comes pre-installed on Samsung phones. We also show how to delete SMS messages in Facebook Messenger if you set it as your default. All instructions listed below show how to delete single and multiple messages. However, if you accidentally deleted the wrong message(s), we suggest a few tools to get them back. Delete an individual text message on Android This applies to Google's Messages app. The icon has lines in a conversation bubble. Step 1: Tap to open Messages. Step 2: Tap and hold on the message you want to be deleted. Tap the X in the top left corner if you marked the wrong message, or tap the message to deselect. Step 3: Tap the trash icon located in the top right corner. Step 4: Tap Delete in the pop-up window to confirm. Delete an individual text message on Samsung This applies to Samsung's stock Messages app installed on its phones. The icon has dots in a conversation bubble. Step 1: Tap to open Messages. Step 2: Tap and hold on the message you want to be deleted. Tap the X in the top left corner if you marked the wrong message. Step 3: Tap Delete located on the slide-up menu at the bottom. Step 4: Tap Delete in the pop-up window to confirm. Delete an individual text message on Facebook Messenger If you're using Facebook's app as your default SMS client, you can filter out your private messages by tapping the SMS button in the app's search bar, leaving only SMS messages visible. Tap it again to add Facebook messages back to the list. Step 1: Tap to open Facebook Messenger. Step 2: Tap and hold on the message you want to be deleted. Step 3: Tap Delete listed on the pop-up menu. Unfortunately, there's no way to delete multiple messages at once from within the Messenger app. Delete multiple messages at once on Android This applies to Google's Messages app. The icon has lines in a conversation bubble. Step 1: Tap to open Messages. Step 2: Tap and hold on the first message you want to delete. A checkmark should appear to its left. Step 3: Tap on all other messages you want to be deleted. Step 4: Tap Delete located on the slide-up menu at the bottom. Step 5: Tap Delete in the pop-up window to confirm. Delete multiple messages at once on Samsung This applies to Samsung's stock Messages app installed on its phones. The icon has dots in a conversation bubble. Step 1: Tap to open Messages. Step 2: Tap and hold on the first message you want to delete. A checkmark should appear to its left. Step 3: Tap on all other messages you want to be deleted. Step 4: Tap Delete located on the slide-up menu at the bottom. Step 5: Tap Delete in the pop-up window to confirm. Recovering text messages If you accidentally deleted texts and need to restore them, immediately put the Android device into airplane mode. This prevents further changes to your local data, in this case, your phone overwriting deleted texts with new ones. After that, you have two options. Use Google Drive One way to restore deleted messages is to reset the phone to its factory defaults and then restore it with a backup saved on Google Drive. However, you need to check this backup first and make sure it wasn't saved after you deleted the texts. If it was saved after the deletion, there's no reason to take this route. If you haven't backed up to Google Drive, skip this section altogether. Step 1: Tap to open Google Drive. Step 2: Tap the three-line "hamburger" icon located in the top left corner. Step 3: Tap Backups listed on the roll-out menu. Step 4: Tap Backup, listed under This Device. On this screen, you should see an SMS entry. If it's dated before you deleted the texts, then you can use it to restore your deleted texts. This is an extreme option, however, but the only one outside of using third-party software. Use third-party software Here are a few suggestions that work well in retrieving deleted texts. Android Data Recovery (\$50) This is one of the more popular tools in recovering data from an Android phone, including text messages. Available for Windows 10 and MacOS, this desktop software will scan all deleted items and present a list of data you can pick and choose to recover. It even retrieves deleted photos, videos, messages, and photos delivered through WhatsApp. Android Recovery Wondershare Dr.Fone (\$70+) This restoration tool supports the most modern Android devices. You can also download and install the application on both MacOS and Windows-based devices. This program will enable you to promptly retrieve text messages, images, videos, and even information from third-party apps like WhatsApp and others. In addition, it can help you to collect lost files from your device, resulting from a system failure, rooting error, and many more unfortunate situations. Wondershare FonePaw (\$49+) This specific software will allow you to recover information from machines operating on the latest version of Android, all the way back to the ancient Android 2.1. It's compatible with all the most popular brands and will also assist you in recovering many different types of data, from text messages and contacts to images, media, and documents. It can even retrieve WhatsApp data. The restoration consists of internal storage, as well as SD cards and SIM cards. Fonepaw SMS Backup & Restore (Free) To protect your text messages and make sure they're secure, you must have an application that produces backups of your texts. If you regularly create backups, then you're one of the fortunate ones. This application will allow you to save texts and call records. It runs on devices with the Android 4.0.3 version or above and is extremely easy to use, permitting you to back up to Google Drive or Dropbox. Google PlayStore Editors' Recommendations For smartphone users, the camera has become almost a reflex: You see something noteworthy, you capture a snap, and you'll preserve that memory forever. But what if that particular snap isn't worth forever? While paper snapshots are notoriously hard to part with in the hand, digital files in your Android gallery are a lot easier to discard. That said, mistakes happen, and you could change your mind about a picture or video you too quickly threw out. We show you how to delete photos from your Android phone and to recover them if you change your mind. The example below is in Android 10. While Android phones may differ depending on the operating system and manufacturer, the methods described should be fairly similar. Got an iPhone? You can do the same thing. See our guide on how to delete and recover photos from your iPhone. Delete photos from the Gallery app Almost all Android phones have a Gallery app that stores photos, videos, and screenshots taken with the smartphone camera, and images from other sources that you have downloaded from websites or saved from email or text messages. From the Gallery, you can remove one image or many images simultaneously. Here's how. Tap to launch the Gallery app. Tap the Photos button to access all of your photos. Tap the Trash can icon at the top. Select all the images you want to throw away by tapping the circles at the upper left of each picture. The selects will show a checkmark. Tap the Delete button at the bottom of the window. You may get an alert asking if you're sure you want to delete these images. Tap Delete again. Your images will then move to the Trash and after seven days they will be permanently deleted. To permanently delete these images immediately tap the three-dot icon at the upper right and tap Trash. In the Trash, tap the three-dot icon again and tap Empty Trash or tap the album icon to open the album and tap the trash can with the X in it to select the pictures you want to remove immediately. Tap Delete at the bottom of the screen. A dialog will appear to ask if you're sure. Tap Delete again and they are gone forever. Restore deleted photos from the Gallery app But wait just a minute! What if you deleted something by mistake? No worries. You can easily retrieve and restore it to the gallery. Here's how. Tap the three-dot icon at the upper right. Tap Trash to see the album containing the images you deleted. Tap to open the album. Tap the Restore icon. Tap any image you want to save or Select all. Tap Restore. Delete photos from Google Photos Google Photos is a five-year-old photo sharing and storage service that stores photos up to 16 MP and videos up to 1080p. The service is free and unlimited until June 1, 2021. In November 2020, Google announced that it will end its free unlimited storage for "high quality" or "express quality" photos starting on June 1, 2021. Existing photos are not affected, but new photos uploaded after that date will count against the free 15GB storage quota spread among Google Drive, Gmail, and Google Photos. Here's how to delete photos from the Google service. The same method works for both individual photos and albums. Launch Google Photos. Scroll to choose a photo you want to delete. Tap the Trash icon at the bottom right of the screen. A dialog appears asking if you want to remove the picture from your Google account. Tap Move to Trash. If you make a mistake, you can tap Undo right there. To access the trash, tap Library at the lower right of the screen. Tap the Trash button and it will show all pictures in the trash, which will be permanently deleted after 60 days. Beware: If you are using Google Photos as a backup in the cloud, or your Android phone comes with only Google Photos, do not use it to delete photos from your phone because that action will also delete your online backup. Make sure you are using the Gallery app on your phone (instructions above) or another third-party app like QuickPic Gallery Dark or Gallery to get rid of photos you want to keep in the Google cloud but not on your handset. Restore deleted photos from Google Photos In the Trash screen, tap the Select button at the top right. Tap any or all images to select them. Tap Restore. An alert asks if you want to restore the images. Tap Restore. Recovering photos using third-party software You always have the option of using a third-party software to retrieve erased images. Wondershare's Dr.Fone and iMobie's Phone Rescue for Android are only two examples of recovery software that's available to the public. Wondershare Dr.Fone Wondershare Dr.Fone Data Recovery (Android) enables the retrieval of your pictures and a variety of other media data from your Android handset. It provides a suite of rescue and repair devices that lets you recover data from broken or damaged machines and retrieve data lost during any updates. iMobie PhoneRescue for Android iMobie PhoneRescue for Android allows you to take control of your photo gallery as well as your music, contacts, text messages, and other essential files, giving you the ability to retrieve them quickly (and, of course, have the peace of mind knowing you haven't lost anything). iMobie PhoneRescue for Android lets you preview and choose your removed images, so you can select only the ones you'd like to restore. This convenient software is compatible with all Android devices, such as Samsung, Sony, LG, Google, Huawei, Motorola, and HTC. Editors' Recommendations
